

III. Amendments to the Claims:

Claims 1-6 (Cancelled).

Claim 7 (Previously Amended): An adapter card including means for selecting between two different voltages for use by the adapter card as a main power supply voltage, the adapter card further comprising:

means responsive to application of a first voltage at a first input of the adapter card for using the first voltage as the main power supply and preventing a second voltage applied at a second input of the adapter card from being used as the main power supply, where the second input is a default input; and

means responsive to a first voltage not being applied to the first input of the adapter card for using the second voltage applied to the second input as the main power supply.

Claim 8 (Original): The adapter card of claim 7 wherein the adapter card is a PCI adapter.

Claim 9 (Original): The adapter card of claim 7 wherein the first voltage is less than the second voltage.

Claim 10 (Original): The adapter card of claim 7 wherein the first voltage is +3.3 volts and the second voltage is +5 volts.

Claim 11 (Original): The adapter card of claim 7 wherein the first voltage is +5 volts and the second voltage is +3.3 volts.

*B1
cancel*
Claim 12 (Original): The adapter card of claim 7 further comprising means for regulating the second voltage.

Claim 13 (Original): The adapter card of claim 7 wherein the means responsive to the first voltage being present at the first input comprises at least one transistor.

Claim 14 (Original): The adapter card of claim 7 wherein the means responsive to the voltage not being present at the first input comprises at least one transistor.
